

## Ready to get coloring?

This coloring book is going to take you on a colorful journey through the magical wonders of our natural world. We hope you'll enjoy bringing each picture to life.

Sprout pencils are not just great for coloring. When they become too short to use, you can plant them and watch them spring to life as flowers, herbs or vegetables.

Here's a cool fact - by coloring with your Sprout pencils, you just helped make our planet a greener place to live. That's a pretty special thing to tell your friends.

Have a fun and playful time writing, coloring and planting. We hope you'll share your drawings with us on either Facebook or Instagram.

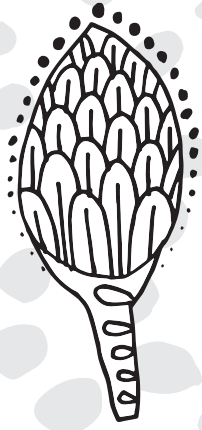

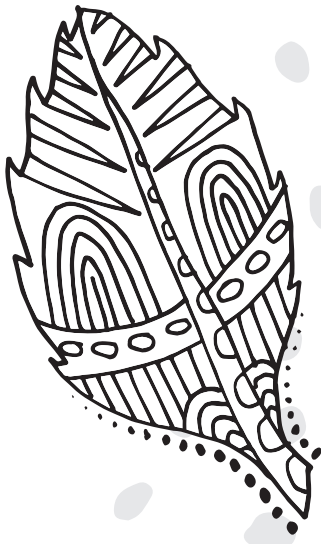

Happy coloring!

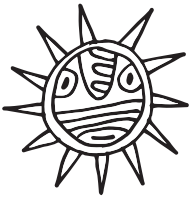

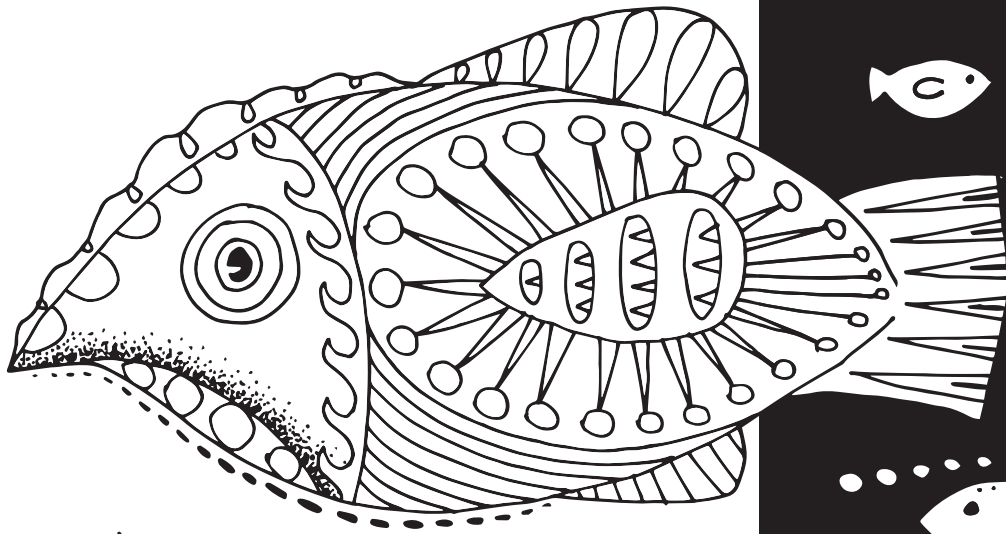

Forests cover 31% of the land area on our planet.

They are the planet's lungs, producing oxygen that humans and animals are so dependent on.

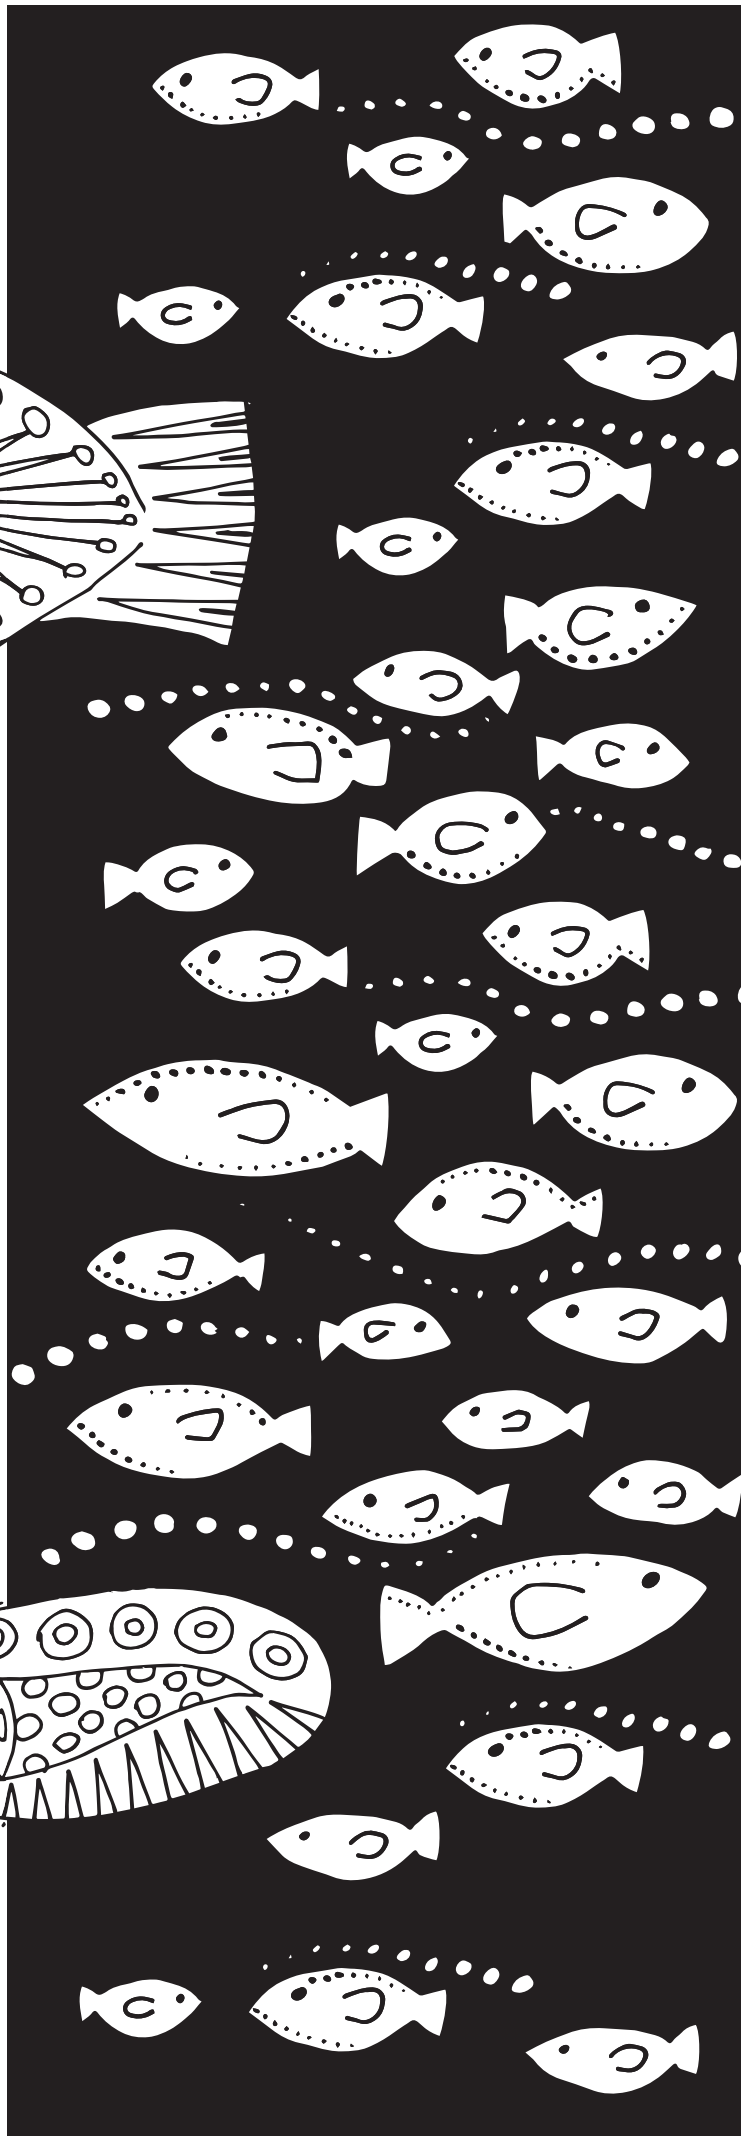

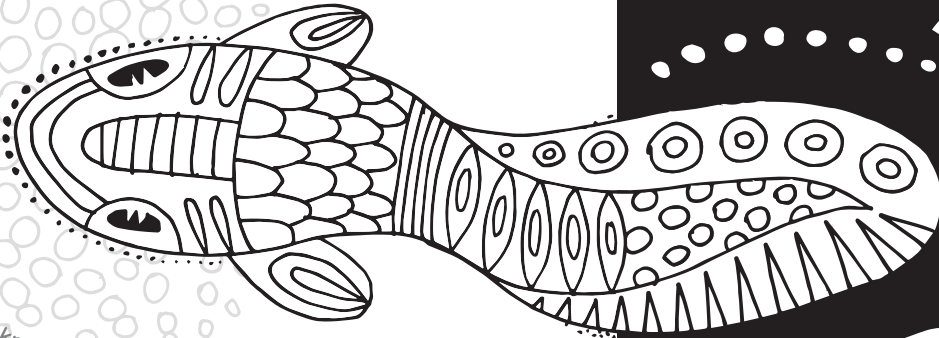

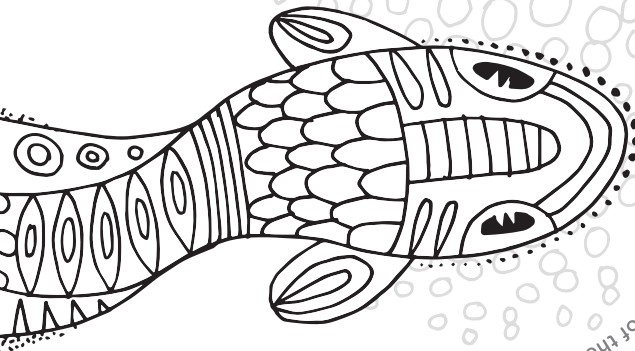

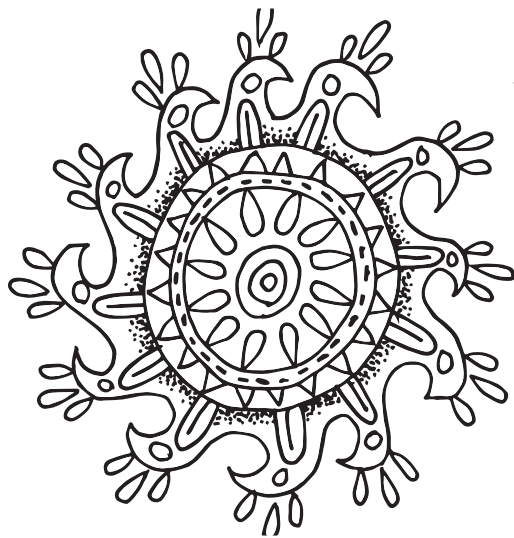

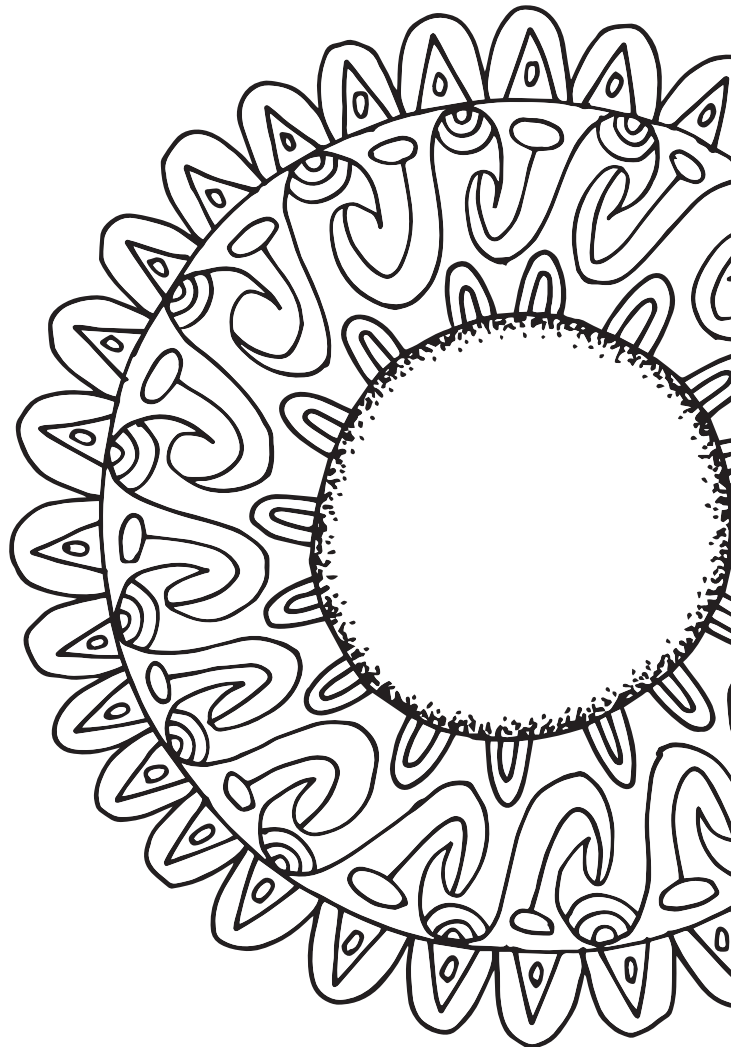

The life of a butterfly starts as a caterpillar. It finds a good place to become a pupate, and after 2 weeks it has transformed into a butterfly.

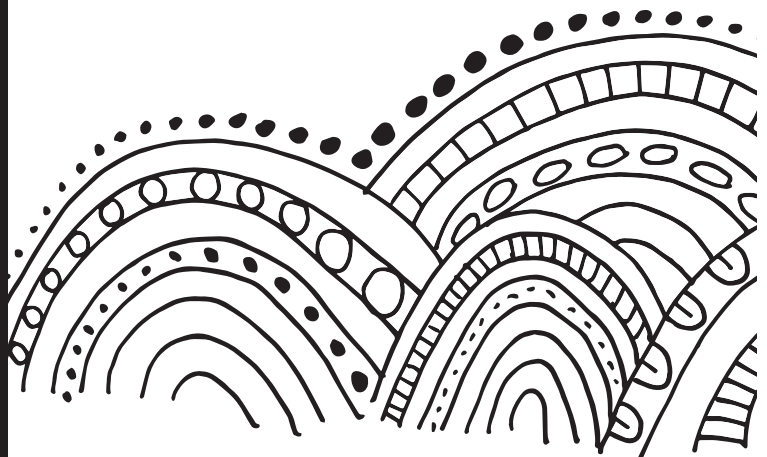

There are around 30,000 different fish species in the world today. Some of them are able to absorb light and emit it as a different glowing color. This phenomenon is known as biofluorescence.

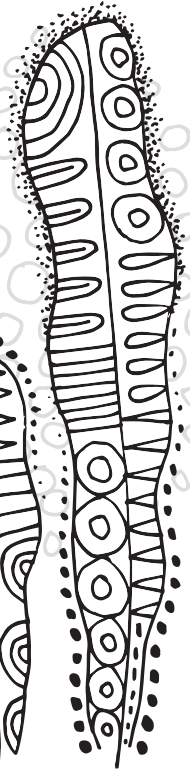

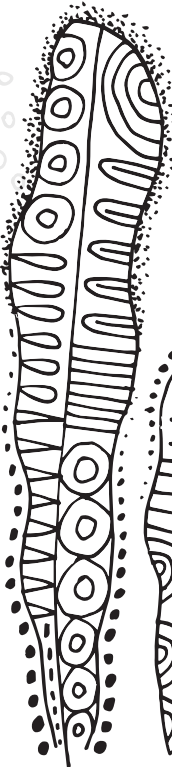

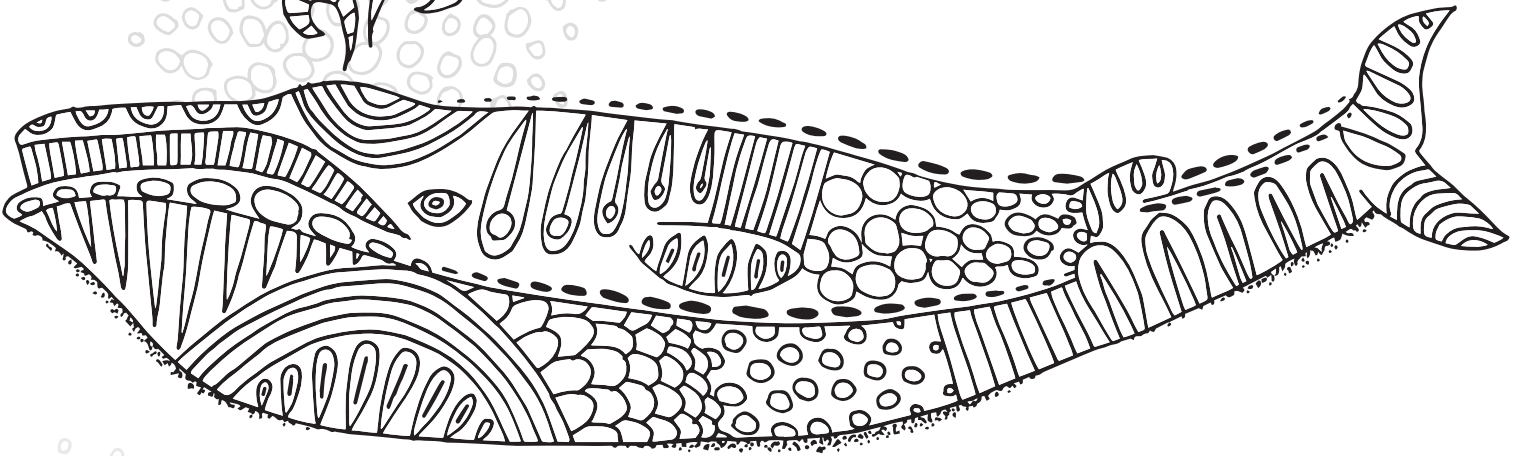

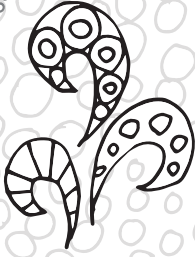

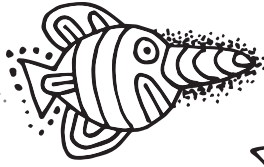

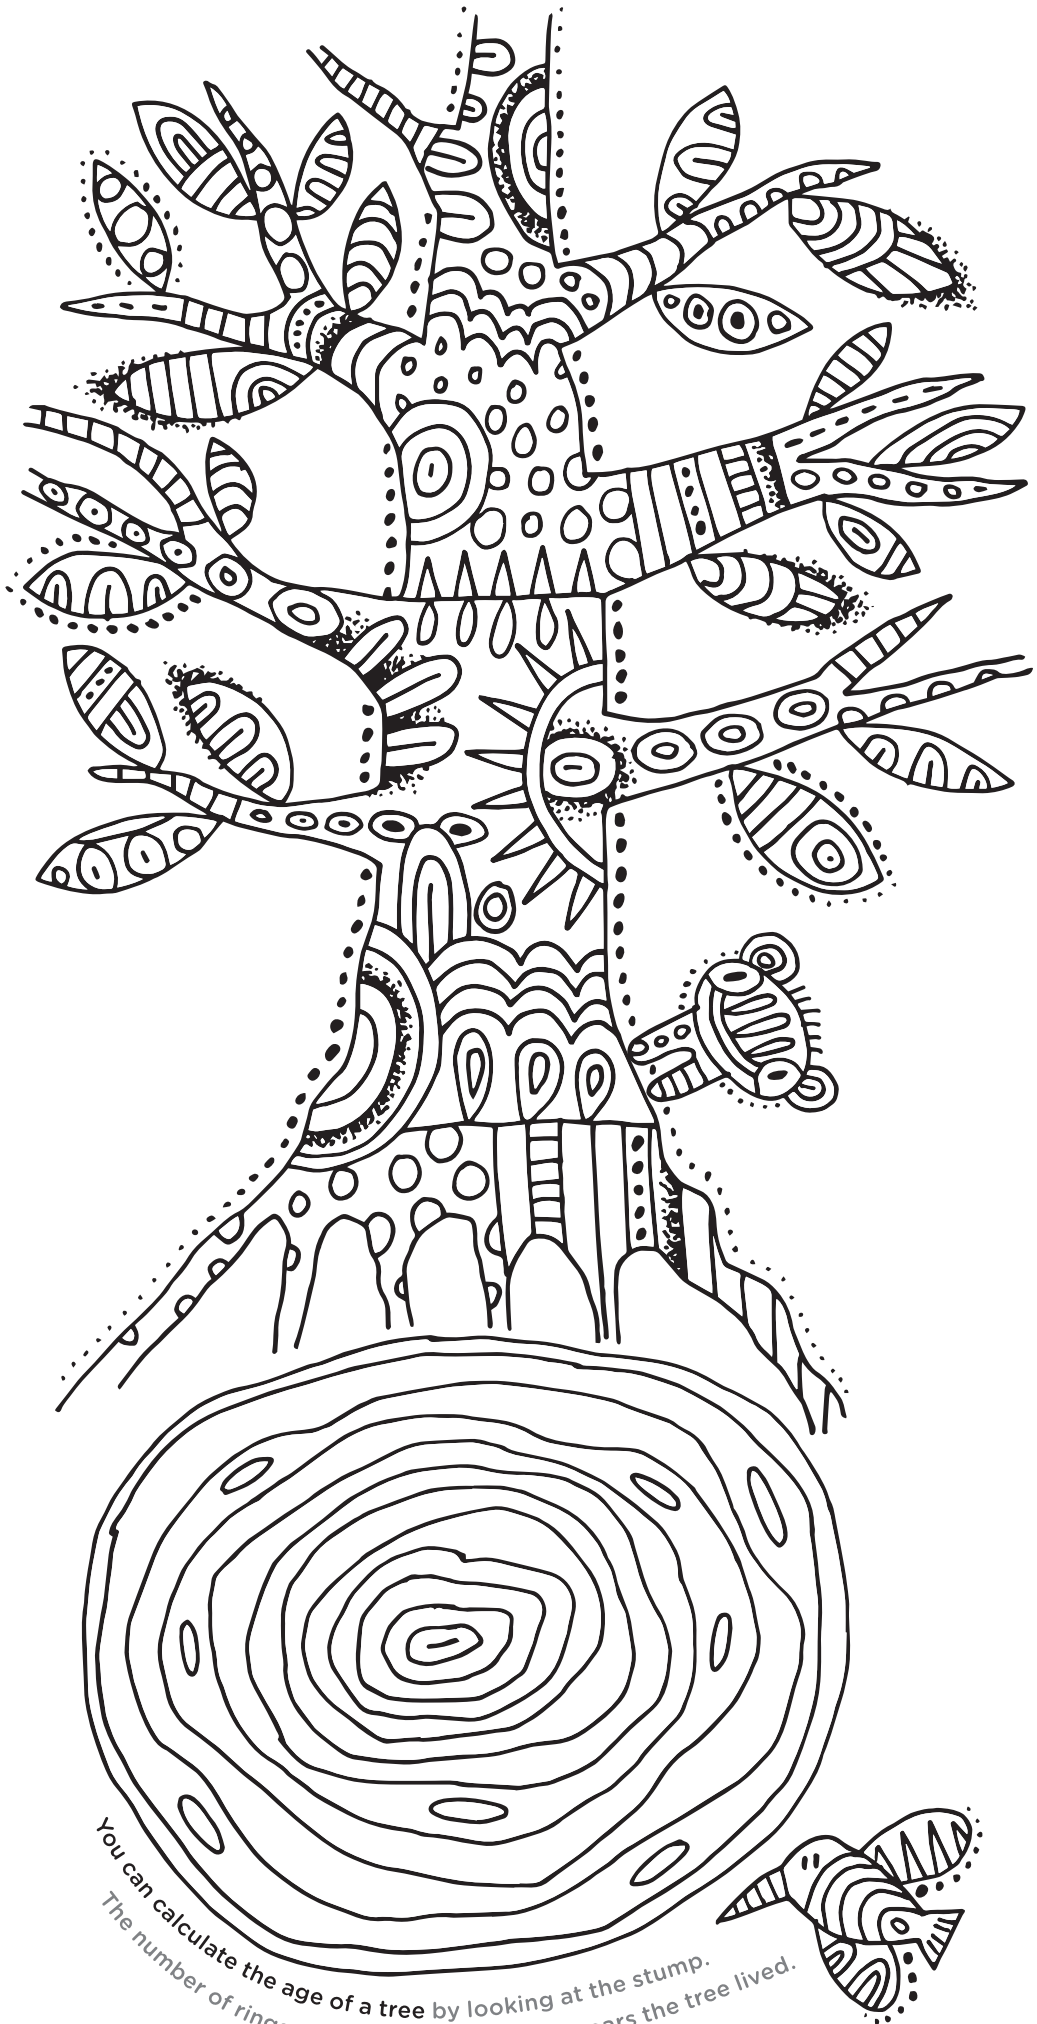

The sun  
is actually  
a star.  
Without the  
light from the  
sun, hardly  
no plants or  
animals could  
survive.

The blue whale is the largest animal on Earth. The baby blue whale can drink 687 litres of milk per day during its first year.

You can calculate the age of a tree by looking at the stump.  
The number of rings indicates the number of years the tree lived.

# Reuse old things as planting pots

Connect the numbers and see what kind of old things you can use to plant pencils or seeds in. Could it be an old toy car? A rubber boot that's too small?

Perhaps you feel inspired to plant seeds yourself? If you look around, you can surely find more old things at home and turn them into planting pots.
